

Inspiring Environmental Literacy AMONG TK-12 STUDENTS Virtual Poster Session

Event Highlights

It is more important now more than ever to inspire a generation of environmentally literate students! This can be challenging and there are many reasons for despair but by focusing on solution-oriented lessons we place students in the driver's seat and give them cause for hope. These fast paced interactive virtual poster sessions will:

- cover a broad range of topics including climate, oceans, energy, biodiversity, and citizen science, among others
- introduce free resources, lessons and programs that engage students directly in science practices
- provide opportunities to network with like-minded educators
